NeuroPod

The New Benchmark for Workplace Wellbeing

Wellness, simplified. NeuroPod turns recovery into an effortless experience. Backed by Neurosonic® low-frequency vibration technology, it activates your body's recovery systems — easing stress, improving sleep, and sharpening focus. You don't have to try — just sit back. The tech does the work.

Loook Industries Ltd.

Designed to reduce stress and improve sleep quality.

NeuroPod is the one thing you can implement today that immediately supports your people — without asking them to do anything. **No training. No behavior change. No mental effort**.

It's powered by Neurosonic® low-frequency **vibration technology**, which activates the body's recovery systems — **improving sleep, lowering stress, and boosting focus and energy** — passively. Just sit down. The tech does the work.

Fast, effortless recovery in minutes. No training required.

Massage chairs work on your muscles. Sleep pods let you nap. This wellness pod **works on your nervous system** — the system that controls your stress, recovery, sleep, and overall balance.

Sure, better management practices, healthier eating, and disconnecting after work all help — but they take months or years to fully integrate. **NeuroPod delivers measurable benefits** from the very first session and becomes a core part of a company's broader wellness ecosystem.

A private, science-backed recovery experience in just 10–40 minutes — making it one of the only wellness investments that fits seamlessly into the modern workday.

Unlike wellness initiatives that depend on personal discipline, this is effortless. **The technology does the work — your people just sit down**.

Better-rested, less-stressed people perform at their best.

Most workplace wellness solutions are valuable, but they take time to work — like exercise, meditation, or lifestyle changes. **NeuroPod delivers benefits from day one**.

Short-term effects (single session): Calm down quickly before a big meeting, energise yourself mid-day, or reset after a stressful moment — all in 10–40 minutes.

Long-term benefits (regular use, 2–3 times per week): Improved sleep quality, reduced stress levels, and better overall recovery. It doesn't matter which program you choose — the consistent stimulation of the body's recovery systems compounds over time.

For companies, this means:

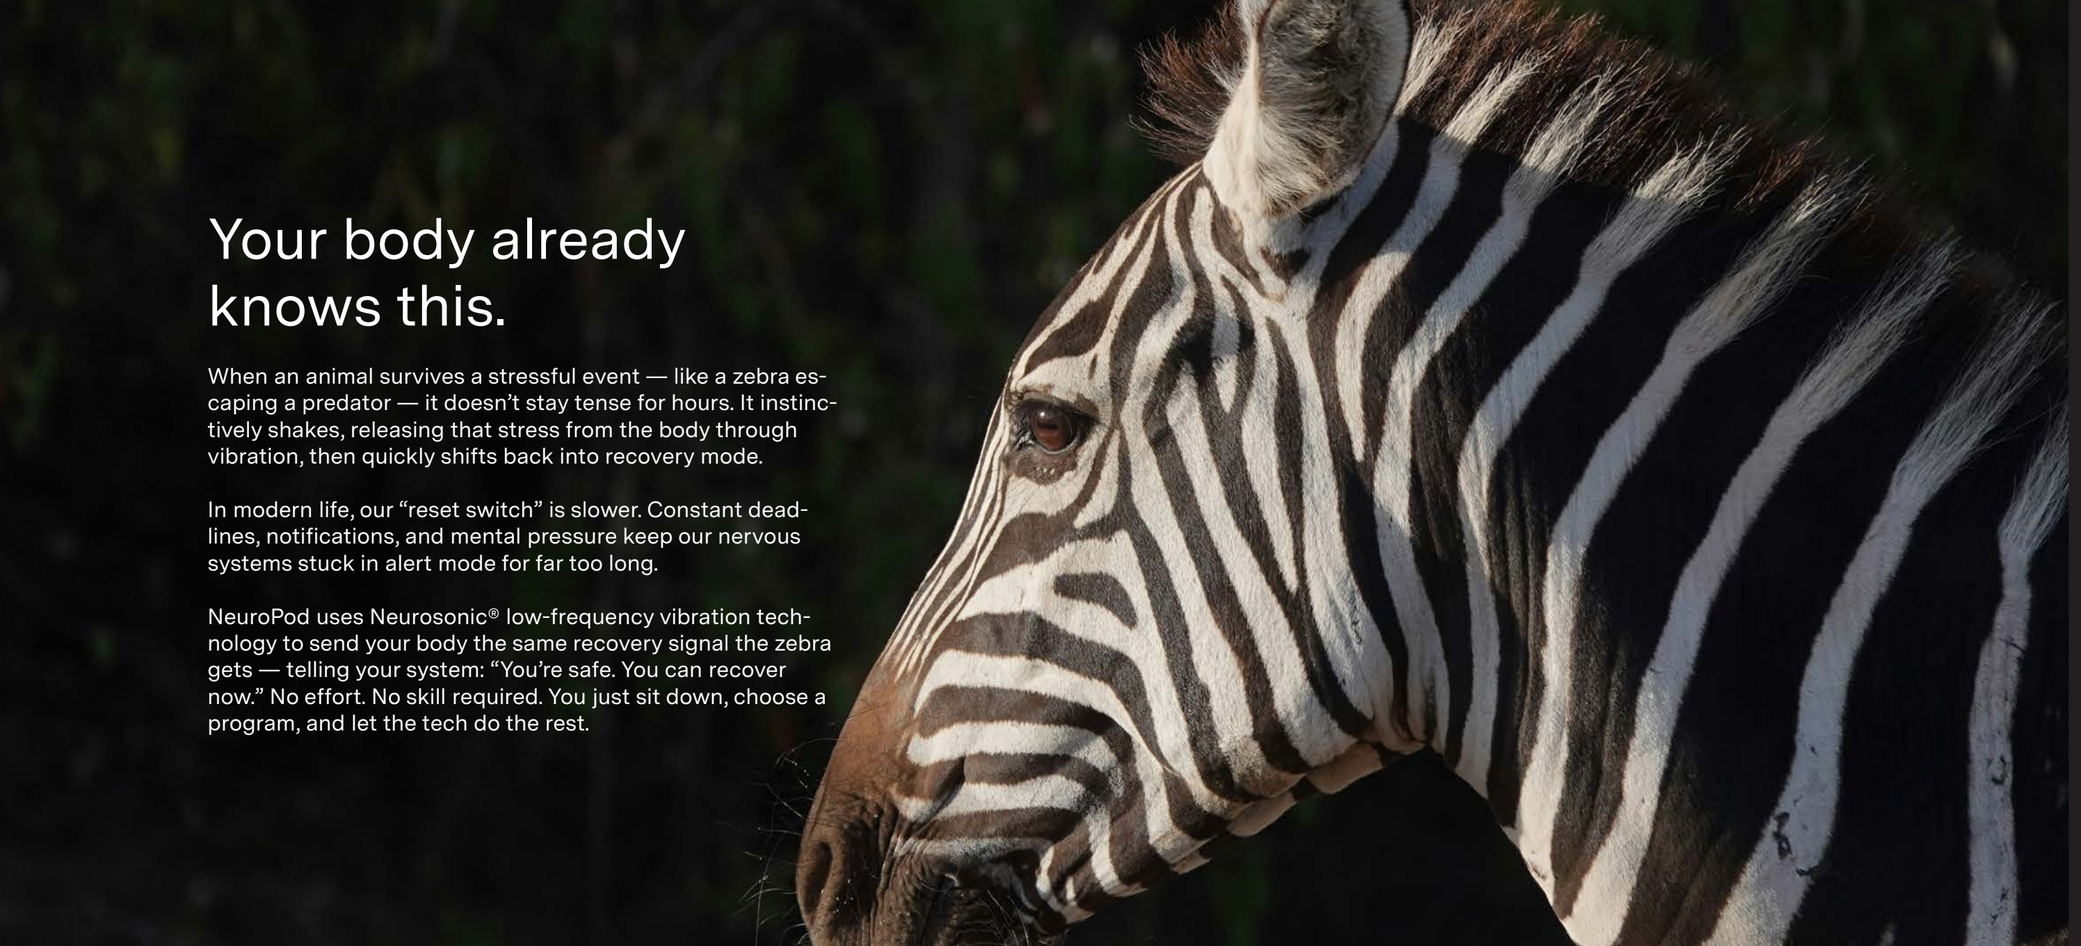
- **Employees perform better, with more consistent focus**
- **Stress-related sick leave can decrease**
- **You offer a tangible, felt benefit — not just a policy or a promise**

Your body already knows this.

When an animal survives a stressful event — like a zebra escaping a predator — it doesn't stay tense for hours. It instinctively shakes, releasing that stress from the body through vibration, then quickly shifts back into recovery mode.

In modern life, our "reset switch" is slower. Constant deadlines, notifications, and mental pressure keep our nervous systems stuck in alert mode for far too long.

NeuroPod uses Neurosonic® low-frequency vibration technology to send your body the same recovery signal the zebra gets — telling your system: "You're safe. You can recover now." No effort. No skill required. You just sit down, choose a program, and let the tech do the rest.



For the technically curious:

The system uses precisely calibrated low-frequency pulsetrains, delivered through the entire body via the reclining surface. These frequencies are tuned to stimulate the parasympathetic branch of the autonomic nervous system — the part responsible for rest, digestion, and repair.

Depending on the program, the vibration patterns either encourage deep relaxation, improve circulation, or activate the body's alertness systems, with effects supported by published research and clinical use cases.
