ARC

Recovery Made Effortless

In just 16 minutes, ARC boosts circulation, eases tension, and refreshes your legs
— helping your body recover while you work, rest, or travel.

Loook Industries Ltd.

When Everyday Life Weighs on Your Legs.

Everyday life takes a toll on your legs. Long hours at a desk, endless travel, or being on your feet all day can leave them feeling heavy, tense, and drained.

ARC is the solution.

It looks like a sleek footstool, but inside it carries **advanced low-frequency vibration technology** — now focused exactly where you feel it most: your calves. In just **16 minutes**, **ARC boosts circulation, eases tension, and refreshes your legs**, helping your body recover while you work, rest, or travel.

Designed for Work, Travel, and Everyday Use.

ARC isn’t just a footstool. It’s an everyday recovery ritual
— built to keep people moving.

- **Offices & Workspaces**
Discreet recovery under a desk or in shared wellness areas.
- **Airports & Lounges**
A simple reset before or after long flights.
- **Hotels & Hospitality**
Premium recovery for guests.
- **Gyms & Sports Clubs**
Circulation support post-training.
- **Healthcare & Elder Care**
Gentle, effortless daily leg recovery.
- **Public Spaces**
Compact, durable, and intuitive for everyone.

Effortless Recovery, Powered by Smart Technology.

One button. No setup. No effort.

This isn’t massage. It’s recovery on a neurological level.

ARC uses low-frequency vibration to stimulate the body’s autonomic nervous system — the system that regulates recovery, balance, and stress response. That’s why the effect is real, measurable, and lasting, without relying on pressure, technique, or concentration.

ARC can be used with any lounge chair, or paired with the matching **ARC Chair** — a compact set that combines design with performance. Choose the footstool on its own, or the complete ARC setup, depending on your space.

Founded in Finland, Loook Industries designs the next generation of workplace and public-space furniture — built around human moments, not just tasks. Our work bridges design and wellbeing, creating tools that help people reset, recharge, and perform at their best. With innovations like NeuroPod, we're leading a new era of wellness-driven design, where recovery and performance coexist beautifully.
